**The Master Fund information (The master fund that the fund invests more than 20% of its NAV)**

Master Fund name :	<a href="#">First Sentier Investors Global Umbrella Fund Plc – FSSA Asian Equity Plus Fund Class I (Accumulation) USD</a>
ISIN code :	<a href="#">IE00B067MR52</a>
Bloomberg Ticker :	<a href="#">FSTAEPA:ID</a>

**Definitions**

<b>Maximum Drawdown :</b>	The maximum percentage of loss of a fund over the past 5 years (or since inception if the fund has been established for less than 5 years). It is measured from the highest value of the fund's NAV per unit to the lowest value during the period that the NAV per unit is depreciating. The Maximum drawdown is used to assess the risk of possible loss that could occur from investing in a fund.
<b>Recovering Period :</b>	A duration of time that let the investors know how long it will take for a fund to recover from a peak of loss to the original level of investment.
<b>FX Hedging :</b>	Percentage of foreign currency denominated assets in the investment portfolio that are hedged against foreign exchange risk.
<b>Portfolio Turnover Ratio :</b>	The trading frequency of assets in the investment portfolio during a certain period of time. It is calculated by taking either the total amount of new securities purchased or the number of securities sold (whichever is less) over a period of one year, divided by the average net asset value (NAV) of the fund over the corresponding period. A fund with high portfolio turnover indicates that the securities in the portfolio are frequently traded by the fund manager and hence high securities dealing cost. Therefore, investors must take into consideration the performance of the fund in order to determine the cost worthiness of such securities trading transactions.
<b>Sharpe Ratio :</b>	A ratio between the excess return of a fund and the risk of investment. The Sharpe ratio reveals the average investment return, minus the risk-free rate of return, divided by the standard deviation of returns for the fund. The Sharpe ratio reflects the extra return that should be received by the fund to compensate the amount of risk taken in investment. The fund with a higher Sharpe ratio is considered superior to other funds in terms of management efficiency since it provides higher excess return under the same risk level.
<b>Alpha :</b>	The excess return of a fund relative to the return of a benchmark index. A fund with high alpha indicates that it is able to beat the performance of its corresponding benchmark which is a result of the capabilities of the fund manager in selecting appropriate securities for investment or making investment in a timely manner.
<b>Beta :</b>	A measure of the degree and direction of volatility of the rate of return of assets in the investment portfolio of the fund compared to the changes in the overall market. A beta of less than 1.0 implies that the rate of return of the fund's assets is less volatile than that of the securities in the broader market whereas a beta of greater than 1.0 implies that the rate of return of the fund's assets is more volatile than that of the broader market.
<b>Tracking Error :</b>	An indication of how efficient the actual performance of the fund can replicate its corresponding benchmark. A low tracking error implies that the fund has the efficiency to generate a return on investment close to the benchmark return whereas the higher tracking error, the more divergence of the fund from its benchmark.
